Effective barrier to entry

Do you want to boost security at your premises and make sure that undesirable elements do not gain entry into your property? An ordinary fence will not deter entry, but a properly installed, well serviced and functional electric fence will ensure safety of your business or residential premises.

What is an electric fence

A component called a power energizer converts power into a brief high voltage pulse. One terminal of the power energizer releases an electrical pulse along a connected bare wire about once per second. Another terminal is connected to a metal rod implanted in the earth, called a ground or earth rod. A person or animal touching both the wire and the earth during a pulse will complete an electrical circuit and will conduct the pulse, causing an electric shock. (source Wikipedia) The electric shock is not meant to be lethal according to the laws of the country, but will be enough to cause a level of discomfort to the intruder.

An electric fence can either be free standing or can be

installed on top of a wall barrier.

What are the advantages of installing an electric fence?

Protection- The electric fence's protection is both a physical and psychological one. Though the shock that is delivered is unpleasant and painful, this is not lethal.

Easy installation- a reliable service provider such as Guard-Alert

Electronics can install an electric fence easily as the components are lightweight and easy to carry

Versatility- the electric fence can be used in a variety of scenarios. The fence can either be free standing or can be installed on top of a wall guard. It is possible to

install the electric fence in any soil condition

Maintenance- electric fences are easy to maintain. Maintenance is focused on ensuring that the battery and fence charger are properly serviced and are in good working order

Portability- electric fences are light and easy to carry making any required modifications uncomplicated.

Functionality- the fence functions fully even when there is a power cut because of the backup battery

Enhanced security- the client has the choice to link the fence to an alarm which in turn is linked to a rapid response service. This will ensure quick response from the Guard-Alert

Electronics rapid response team who are on standby 24 hours a day, seven days a week, in the event that the fence is tampered and the alarm goes off.
